Derwent Abstract: (**FR2850575A**) **Novelty** - Composition containing a water-sensitive active ingredient, other than dehydroepiandrosterone (DHEA) or its precursors or derivatives, is an inverse emulsion comprising a hydrophilic glycol or water/glycol phase dispersed in a continuous lipophilic phase with an emulsifier having a hydrophilic-lipophilic balance (HLB) of 2-7.
ACTIVITY - Dermatological; Antiseborrheic; Antipsoriatic; Antiinflammatory; Virucide; Antirheumatic. No biological data given.
MECHANISM OF ACTION - None given.
Use - The composition is useful for preventing or treating dermatological disorders, including acne, seborrhea, seborrheic eczema, wound healing problems, stretch marks, bullous dermatosis, collagen disease, actinic keratosis, psoriasis, ichthyosis, Darier's disease, palmoplantar keratoderma, leukoplakia, lichen, atopic eczema, warts, verruciform epidermodysplasia, papillomas and UV-induced proliferations, as well as psoriatic rheumatism, respiratory atopy and

gingival hypertrophy, and for combating skin aging and reducing pigmentation (all claimed). The composition is also useful as a cosmetic product for application to the skin, visible organs or mucosa.

Advantage - The composition has good physical stability, confers good chemical stability and bioavailability on the active ingredient, has good skin compatibility and can contain large amounts of dispersed phase.
